You bring in the capabilities of Micro Focus

LeanFT

You bring in

Micro Focus Mobile Center

The tools used:

• Create more robust or generic identifications for your objects
  With
  Object Identification Center to spy on the objects in your
  app, experiment with different ways to identify those objects,
  and generate code to use in your scripts

The tools used:

• Use Object Identification Center to spy on the objects in your
  app, experiment with different ways to identify those objects,
  and generate code to use in your scripts

The challenge

• Trace who is using which device
  With
  • Increase security — Appium scripts can be forced to authenticate

Countries. All other marks are the property of their respective owners.
